

April 2012

## Progress Report: Earnings Growth in U.S. Metros

*In this brief, we examine the growth of average earnings among the nation's 372 metro areas. We analyze annual change and the impact of inflation.*

According to the latest data from the U.S. Bureau of Labor Statistics, in February 2012, 344 of 372 U.S. metropolitan areas added employment over the last year. The numbers provide convincing evidence of widespread post-recession growth.

While trends in employment are the typical gauge of economic wellbeing; earnings<sup>1</sup> can provide a deeper measure of the value of economic change. All jobs are not equal. Earnings are a measure of

**Metros Experiencing Growth in Average Weekly Earnings**  
(highlighted in green)

productivity and economic contribution. Besides the mix of industries, earnings can also reflect the level of aggregate skills in an area. Significant changes in earnings can point to long-term structural changes. At this point in time, as regional economies emerge from one of the most severe recessions in recent history, changes in earnings can be an early indicator of developing opportunities or challenges.

As of February 2012, 241 U.S. metros (64.7 percent) had experienced positive earnings growth over the year. When inflation<sup>2</sup> is factored in the number drops to 179 metros (48.1 percent) having real earnings growth over the year. To eliminate single month abnormalities or disruptions, the average annual change in earnings over the previous six months was calculated. Before adjusting for inflation, 239 metros (64.2 percent) showed positive earnings growth. After inflation adjustment, the number of metros with real earnings growth dropped to 162 or 43.5 percent.

Alexandria, LA had the highest annual percentage growth in earnings, up 33 percent on average over the previous six months. Midland, TX was second at 27 percent. On the downside, Kokomo, IN experienced an average annual earnings decline of 24.8 percent, followed closely by El Centro, CA with a drop of 22.2 percent.

<sup>1</sup> We use average weekly earnings covering all nonfarm private sector employees. The series is not seasonally adjusted.

<sup>2</sup> The U.S. City average inflation rate for all urban consumers equaled 2.9 percent in February 2012, as published by the U.S. Bureau of Labor Statistics. For the six month average calculation, an inflation rate of 3.3 percent was used.

## All U.S. Metro Areas
